

For Immediate Release

October 28, 2010

Wave Wing Project

SebaiCMET, Inc., Clean and Green Enterprises, Inc. and Florida Institute of Technology

Clean and Green Enterprises, Inc. was formed to advance renewable energy technology through research and development. Our patent pending technologies for energy and purified water have national and international applications. SebaiCMET, Inc. focuses on global marketing, sales and manufacturing of these technologies.

Project Beginnings:

The inventor, Lee Marcum, developed several ideas and concepts after many years of independent research, starting back with the oil embargo in the late 1970s. He contacted Dr. Wood of Florida Institute of Technology (FIT), and in 2007 came to FIT to work with Dr. Wood and the ocean engineering students to develop and test the first small scale prototype Wave Wings. The wings were first tested in the wave tank, and then the Project Team built a working scale model (6ft X 10 ft) for testing and evaluation.

After successfully proving the concept, Terence Bolden of SebaiCMET, Inc. started to develop a team of specialized and highly trained professionals to bring into full operation the collaborative relationships needed for research, development and commercialization of the Wave Wings and other technologies designed and developed by Clean and Green Enterprises. SebaiCMET, Inc. provided the funding to FIT for the Wing Wave development and ocean testing through its private investors.

Presently, SebaiCMET, Inc., Clean and Green Enterprises, Inc., and FIT will ocean-test renewable energy units including the wave wings and power generation technologies being developed or reviewed by SebaiCMET, Inc.

Clean and Green Enterprises has developed partnerships with several universities, NASA, and other Space Coast companies including Advanced Magnet Lab and Structural Composites to further develop renewable energy technologies for wave energy, river currents, lakes and reservoirs. SebaiCMET, Inc. is in various levels of negotiations with Latin American countries, with various countries on the African continent, and independent island nations for its products and services.
